THE FORMAT

Three rounds. You decide the winner.

Two hacks per round, one each, ninety seconds apiece. Then the room votes before we move on.

Round 1 · Focus

How we hold attention, and how we pick what to hold it on.

Round 2 · Tasks and info

Where the work lives, and how we find it again.

Round 3 · AI tools

What we actually hand to an agent, and what we keep.

Every hack is one we use ourselves. Nothing here is theory and nothing here is sponsored.

Vote on your phone

A QR code after every round. Scan, pick a side, done in five seconds.

No wrong answer

Different brains, different jobs. Take whichever one fits yours.

Steal everything

Slides and links go up after the session. Photos are fine.

Twenty minutes, six hacks, three votes. If we run long, blame the other one.

1

Focus

How we keep our focus, and what we are working on.

The exit note

Nothing interrupts me from outside and when the interruption comes from inside, I write down where I stopped.

What it is

Remove all distractions around go, go with the flow, and introduce a ending ritual.

How to do it

1. Set Do Not Disturb on your computer, so not notifications pop up
2. When you catch yourself drifting, don't push through and don't just walk away. Two lines. "Stuck on X. Next: try Y." Then stop.

Why it works

Real focus regularly runs an hour or more if nothing breaks it, so the job is to remove the breaker. Use a closing ritual, because switching tasks leaves part of your head in the previous one, and it lingers well past the switch.

The Pomodoro technique

Focus on one task for 25 minutes

What it is

A timer, one task, and a hard stop. Nothing else for 25 minutes.

How to do it

Set a timer for 25 minutes, tell yourself you need to focus on that task for 25 minutes, no other distractions. After 25 minutes, take a 5-minute break and set again for 25 minutes.

PRO TIP: Get a manual timer and physically put it on your phone.

Why it works

Allows you to reset focus, even when screen is spinning or agent is "thinking"

Physical timer on phone forces you to move timer to pick up phone

Phone is still available for authenticator app

Which focus hack are you stealing?

hum.vote/XA49

Scan the code, pick one, and the result is on screen before we start round 2. One vote each, no campaigning.

Give it twenty seconds. Read the room, call the result, move on.

2

Tasks and information

Where the work lives, and how we find it again.

First, the setup: PARA

Projects

A goal with a finish line and a date.

Nordic Summit
2026 deck

Areas

A standard you hold, with no end date.

Speaking. Client
delivery.

Resources

Topics worth keeping, useful more than once.

Power Pages.
Dataverse.

Archive

Done, or dormant. Kept, not deleted.

Last year's
conferences

Projects end and drop into Archive. Areas never end. Resources feed both.

Tiago Forte's PARA. One question decides the bucket: does this thing have a finish line?

The hack: the folder briefs the agent

ClaudeCoworkOS

└─01_Projects

└─└─Community-Events

└─└─└─ **CLAUDE.md** what belongs in this folder

└─└─└─ **MEMORY.md** decisions, contacts, status

└─└─└─Nordic-Summit-2026

└─└─└─└─ **CLAUDE.md**

└─└─└─└─ **MEMORY.md**

└─└─└─└─ HackBattle.pptx this deck

└─02_Areas

└─03_Resources

└─04_Archive

One folder per bucket

01_Projects, 02_Areas, 03_Resources,
04_Archive, sitting in OneDrive.

The brief

CLAUDE.md says what belongs in this
folder, and what does not.

The log

MEMORY.md holds decisions, contacts and
status between sessions.

Most people adopt PARA and stop at folders. It starts paying when an agent can read them.

Remarkable PARA

[PLACEHOLDER: the one-line version.]

What it is

Projects, Areas, Resources, Archive are mirrored. The same four-way split at the top of OneDrive and on the Remarkable, so a scanned contract and a handwritten page about the same project sit under the same name in both places.

How to do it

Create the four folders in OneDrive, then the identical four on the device. When something arrives, place it by hand — and if you can't name the project it belongs to, that's a signal about the thing, not a gap in the structure.

Why it works

Filing forces a decision — to place something you have to know what it's for. The structure isn't storage, it's a question you answer about everything that arrives.

Which system would you actually keep?

hum.vote/9QRT

Same drill. Scan, pick one, twenty seconds. Vote for the one you would still be using in March.

Running score on the board. One round left.

3

AI tools

What we hand to an agent, and what we keep for ourselves.

Tell me why

CRM requirements workshop failure analysis ▾

Plan: I'm running a two-day requirements workshop with a new customer, a mid-sized manufacturer replacing a 12-year-old CRM with Dynamics 365. Workshop is on their site in three weeks.

Attendees: sales director (sponsor), two regional sales managers, one person from customer service, and their IT manager. The sponsor picked the attendees. The people who actually use the current system day to day aren't invited — the managers say they'll represent them.

Structure: day one is current-state process mapping, department by department. Day two is future-state design and prioritising the backlog. I'll facilitate, my colleague takes notes. Output is a signed-off requirements document that feeds the fixed-price proposal.

Context: they've told us the old system "basically works, it's just old." Budget is agreed, timeline is aggressive, and go-live is set before we've written a line of the backlog.

The prompt
It's six months later and this project is in trouble, and the root cause traces back to this workshop. Assume that already happened. Give me the three most likely failure paths, ranked by probability, and for each one name the specific moment in the workshop where it was set in motion. Be blunt and don't offer fixes yet.

Show less

13 minutes ago ↻ ✎ 📄

What it is

AI gets opened deliberately, when there's a formed thought to test. Creativity, problem solving, revising text.

How to do it

The pre-mortem: paste the plan, "assume this failed six months from now, tell me why."

Why it works

Asking "what are the risks" gets you a list you already knew; asking why it failed forces specifics, because explaining a fact is easier than predicting one.

A nightly briefing, written by an agent

The screenshot shows a task configuration interface for 'Evening Look-Ahead Briefing'. At the top right, there are buttons for 'Go to task', 'Run now', and a menu icon. Below the title, there is a toggle switch labeled 'Active' and a text indicating the next run: 'Next run: 9/20/2026, 1:05 AM GMT+2'. Under the 'Schedule' section, it shows a refresh icon and 'Every day at 19:00' with a dropdown arrow. The 'Instructions' section contains a text area with a rich text editor toolbar (bold, italic, bulleted list, numbered list) and the following text: 'Scan my calendar, inbox, and to-do/tasks list covering the next 2 days. Produce a short, scannable briefing that flags only what matters: (1) anything unusual or unexpected on the schedule or in email, (2) anything I need to prepare for ahead of time (upcoming meetings needing prep, deadlines, deliverables), and (3) anything I committed to or promised but haven't followed up on yet (open loops in email/Teams threads). Keep it brief — bullet points, no filler. Email the briefing to me (nick.doelman@readybms.com) with a clear subject line like "Evening Look-Ahead — next 2 days".'

The prompt is the whole hack. Tell it what to flag, and what to leave out.

What it is

An agent reads my calendar, messages and email each evening, then emails me what matters.

How to do it

Write the prompt once, then set a schedule. Copilot here, but any AI with tasks will do.

Why it works

Nothing slips through the cracks, and I plan tomorrow before tomorrow starts.

Which one earns its place in your week?

hum.vote/3HEG

Last vote. Scan and pick the one you will set up before Friday, not the one that sounded cleverest.

Final tally. Announce the winner, then close.

THE RESULT

And the winner is...

The belt is a bit of fun. Walking out with something you actually use is the part that counts.

Tonight's belt

[fill in the winner live, once the third vote closes]

The real winner

Anyone who leaves with one hack they are still using in March.

Now tell us yours

Find us in the hallway, or tag #NordicSummit. We steal shamelessly.

BEFORE YOU GO

Take one, not six

Six hacks in twenty minutes is a menu, not a to-do list.

Pick the one that fits

The hack you keep is the one that suits how you already work. The rest is someone else's system.

Set it up this week

A hack you mean to try in October is a hack you will not try. Ten minutes on Thursday is enough.

Drop what stops earning

Every system we showed you replaced one that stopped working. Review yours twice a year.

Slides and every link in this deck go up after the session.
